

PRESS RELEASE

Event Information:

“Controlling the Micron in Industry and Research“ Summit on 3 and 4 November 2016

Braunschweig/Germany, 29 August 2016 – On November 3 and 4 2016, measurement technology specialist Etalon will host the Etalon Forum in Braunschweig/Germany, a summit focusing on highly precise geometric monitoring, calibration, and control of machine tools and coordinate measuring machines as well as measurements in production environments and demanding research projects. Going by the motto “Controlling the Micron in Industry and Research”, the event is specially designed for experts from production and science. The participants profit from the broad mix of topics which encourages overall knowledge transfer and exchange of experience.

Due to high interest from experts around the world, the summit will be held in English language. It comprises two half days. The conference fee is 95 €. Pre-registration is possible now by sending an email to info@etalon-ag.com.

The program in detail

The Etalon Forum will start on Thursday Nov 3 with insights on the accuracy of machine tools and CMMs as well as their application for conducting measurements in production environments. Speakers include experts from industrial knowledge leaders such as Zeiss, Siemens, Heidenhain, and Fanuc, followed by a specialist from the field of standardization and production authorities from Nuclear Advanced Manufacturing Research Centre (NARMC). The day closes with a get-together of speakers and participants.

On Friday Nov 4, the speakers will address the highly precise measuring and monitoring of structures, fixtures, and machines. The day opens with basic

physical lectures from Physikalisch-Technische Bundesanstalt (PTB), Oxford University, and WZL Aachen. Subsequently, presentations are given on actionable, practical use cases, e.g. the deformation measurement of large telescopes and other measurement tasks in large-scale research (CERN).

The detailed program is available at <http://www.etalon-ag.com/forum2016/>

Target group

The event is suitable for machine tool specialists, production metrology experts from the automotive, aerospace, and energy sector, as well as scientists dealing with challenging measurement tasks.

About Etalon AG:

Etalon AG, founded as a spin-off from the PTB (Physikalisch-Technische Bundesanstalt) in 2004, offers complete system solutions for the calibration, monitoring and accuracy enhancement of machines and structures. Innovative technologies have made Etalon products efficient and easy to handle. Highest accuracy ensures a clear advantage in a demanding environment. Etalon's customers are from machine tool industry, metrology, automotive and aerospace industries, as well as from research sectors.
